You’ve turned the corner. Keep going.

DISCREET, EFFICIENT, EASY-TO-USE
You are taking an important step away from opioid dependence by deciding to use BUNAVAIL

BUNAVAIL® (buprenorphine and naloxone) buccal film (CIII) is a prescription medicine indicated for the maintenance treatment of opioid dependence. BUNAVAIL should be used as part of a complete treatment plan to include counseling and psychosocial support.

Prescription use of this product is limited under the Drug Addiction Treatment Act (DATA).

First and only buccal film for opioid dependence

BUNAVAIL is known as a buccal film because it sticks to the area inside your cheek known as the buccal mucosa.

The BUNAVAIL advantage:

- Easy to use
- Discreet
- Stays in place on the inside of the cheek
- Allows you to talk while it dissolves
- Pleasant citrus taste

BUNAVAIL can be abused in a manner similar to other opioids, legal or illicit. Keep BUNAVAIL in a safe place. Do not give your BUNAVAIL to other people, it can cause them harm or even death. Selling or giving away this medicine is against the law.

Please see additional Important Safety Information on pages 30-31, and full Prescribing Information and Medication Guide at BUNAVAIL.com.

CONTENTS
BUNAVAIL FOR OPIOID DEPENDENCE
BUNAVAIL for opioid dependence

As you initiate your treatment with BUNAVAIL, it helps to have some additional understanding about how opioids may affect your brain, and how buprenorphine may help treat your opioid dependence.

How opioids can affect the brain

Opioids are often prescribed as treatments for pain, and, while they are effective, they can unfortunately lead to physical dependence in some people. Opioids work by attaching to receptors in the brain, which can reduce feelings of pain and produce feelings of euphoria. Long-term opioid use can cause chemical changes in the brain, and may lead to withdrawal symptoms and cravings once opioid use has stopped.

How buprenorphine works

Buprenorphine is a medicine used to treat opioid dependence. It attaches to the opioid receptors in the brain and blocks other opioids from binding to them. In this way, buprenorphine helps to stop withdrawal symptoms and drug cravings without causing strong feelings of euphoria or intoxication.

Q: Can I become dependent on BUNAVAIL?

A: BUNAVAIL contains buprenorphine, an opioid that can cause physical dependence. Your doctor can tell you more about the difference between physical dependence and drug addiction. Do not stop taking BUNAVAIL without talking to your doctor. You could become sick with uncomfortable withdrawal symptoms because your body has become used to this medicine.

Like other opioids (e.g., heroin, methadone, oxycodone, morphine), BUNAVAIL may produce orthostatic hypotension (‘dizzy spells’) in ambulatory individuals.

Please see additional Important Safety Information on pages 30-31, and full Prescribing Information and Medication Guide at BUNAVAIL.com.
THE BUNAVAIL ADVANTAGE

Bunavail (buprenorphine and naloxone)
BUNAVAIL is powered by BEMA® technology

BioErodible MucoAdhesive (BEMA®) technology is a buccal film with a unique 2-layer design, which easily and discreetly delivers to your bloodstream the dose of buprenorphine you need to treat your opioid dependence.

1. **The top layer** adheres to the inside of your cheek and contains the active drug.

2. **A backing layer** acts as a barrier to help facilitate the unidirectional flow of medication to the bloodstream. This reduces the flow of buprenorphine back into the mouth, so less is swallowed.

Low rate of constipation in a 12-week study

68% of patients who reported constipation with Suboxone® tablets or films did not report constipation at 12 weeks after switching to BUNAVAIL.

Patients agree: BUNAVAIL is easy to use and has a pleasant taste

BUNAVAIL makes treating opioid dependence easy for patients. It’s one important part of a full treatment program, which should also include counseling, medication therapy, and other remedies.

In a clinical trial:

- **8 out of 10 patients** who switched from Suboxone tablets or films rated BUNAVAIL as very easy, easy, or neutral to use.

- **9 out of 10 patients** who switched from Suboxone tablets or films considered the mild citrus flavor of BUNAVAIL as very pleasant, pleasant, or neutral.

Q: What are the common side effects of BUNAVAIL?

A: Common side effects of BUNAVAIL include headache, drug withdrawal syndrome, lethargy (lack of energy), sweating, constipation, decrease in sleep (insomnia), fatigue and sleepiness.

Like other opioids [e.g., heroin, methadone, oxycodone, morphine], BUNAVAIL may produce orthostatic hypotension (‘dizzy spells’) in ambulatory individuals.

Please see additional Important Safety Information on pages 30-31, and full Prescribing Information and Medication Guide at BUNAVAIL.com.
Effective dose, efficient delivery

BUNAVAIL buccal film has twice the bioavailability of Suboxone® tablet. This means you get an equally effective amount of buprenorphine, but with half the total dose. So you’re getting the buprenorphine you need to treat opioid dependence, and swallowing less medication.

<tr>
<td>Swallowed</td>
<td>=2 mg</td>
<td>=6 mg</td>
</tr>
</tbody>
</table>

What is bioavailability?
Bioavailability is a term that refers to the amount of drug that enters the bloodstream and has a therapeutic effect. BUNAVAIL has twice the bioavailability of Suboxone tablet, which means that you get an equally effective dose of buprenorphine, but with half the amount (see chart on left).

Same medication, more efficient

You may notice that BUNAVAIL is available in different dosage amounts than those found in other buprenorphine treatments. That’s because BUNAVAIL, with BEMA® technology, delivers its medicine differently from other treatments. The result: You can get the same amount of medicine in your bloodstream with a smaller dosage.

BUNAVAIL is currently available in 3 dosages. Whether you are switching from Suboxone tablets or films or your initial maintenance treatment is with BUNAVAIL, the corresponding Suboxone dose is shown for your reference.

BUNAVAIL buprenorphine/naloxone dose (label on film/package color) Suboxone buprenorphine/naloxone dose

| 2.1/0.3 mg (BN2/purple) | 4/1 mg |
| 4.2/0.7 mg (BN4/blue) | 8/2 mg |
| 6.3/1 mg (BN6/orange) | 12/3 mg |

Q: Can I switch from BUNAVAIL to another buprenorphine product?
A: Do not switch from BUNAVAIL to other medicines that contain buprenorphine without talking with your doctor. The amount of buprenorphine in a dose of BUNAVAIL is not the same as the amount of buprenorphine in other medicines. Your doctor will prescribe a dose of BUNAVAIL that may be different than other buprenorphine-containing medicines you may have been taking.

BUNAVAIL is effective in treating opioid dependence. While taking BUNAVAIL in a 12-week clinical trial, only 7.6% of patients had a positive urine test for a nonprescribed opioid.

Please see additional Important Safety Information on pages 30-31, and full Prescribing Information and Medication Guide at BUNAVAIL.com.
3 HOW TO USE BUNAVAL

THE BUNAVAL ADVANTAGE

FOR OPIOID DEPENDENCE

IMPORTANT SAFETY INFORMATION

Bunavial buccal film
(buprenorphine and naloxone) ©
Using BUNAVAIL correctly

How to open a BUNAVAIL package
To open the BUNAVAIL buccal film foil package, fold along the dotted line and tear or cut with scissors at the slits of each marked corner.

Here’s how to take BUNAVAIL

Once you apply the practice films to the inside of your cheek a few times, it will become second nature. Take BUNAVAIL once a day, always exactly the way your doctor tells you. Do not take it more or less often than prescribed by your doctor. The dose of BUNAVAIL varies from one person to another and may change over time.

1. Use your tongue to wet the inside of your cheek or rinse your mouth with water to moisten the area in your mouth before you place BUNAVAIL.
2. Hold the BUNAVAIL buccal film with clean, dry fingers with the text (BN2, BN4, or BN6) facing up.
3. Place the BUNAVAIL buccal film inside your mouth with the text (BN2, BN4, or BN6) against the inside of your moistened cheek.
4. With your finger, press the BUNAVAIL buccal film against your cheek. Hold it there for 5 seconds as it adheres.
5. Take your finger away from the BUNAVAIL buccal film. It will stick to the inside of your cheek.
6. Leave the film in place until it completely dissolves.
7. If your doctor tells you to use more than one BUNAVAIL buccal film at the same time, place the next film on the inside of your other cheek following the instructions above. Do not place more than two buccal films to the inside of one cheek at a time.

Q: Can I drive after taking BUNAVAIL?
A: Do not drive, operate heavy machinery, or perform any other dangerous activities until you know how BUNAVAIL affects you.

Q: Can I drink alcohol after taking BUNAVAIL?
A: BUNAVAIL can cause serious life-threatening breathing problems, overdose and death, particularly when taken by the intravenous (IV) route in combination with benzodiazepines, sedatives, tranquilizers or alcohol. You should not drink alcohol while taking BUNAVAIL, as this can lead to loss of consciousness or even death.

Please see additional Important Safety Information on pages 30-31, and full Prescribing Information and Medication Guide at BUNAVAIL.com.
Other things to keep in mind when taking BUNAVAIL

- Avoid touching or moving the buccal film with your tongue or fingers
- Avoid drinking or eating food until after the buccal film has completely dissolved
- If you miss a dose of BUNAVAIL, take your medicine when you remember. If it is almost time for your next dose, skip the missed dose and take the next dose at your regular time. Do not take 2 doses at the same time unless your doctor tells you to. If you are not sure about your dosing, call your doctor
- Do not stop taking BUNAVAIL suddenly. You could become sick and have withdrawal symptoms because your body has become used to the medicine. Physical dependence is not the same as drug addiction. Your doctor can tell you more about the differences between physical dependence and drug addiction. To have fewer withdrawal symptoms, ask your doctor how to stop using BUNAVAIL the right way
- If you take too much BUNAVAIL or overdose, call Poison Control or get emergency medical help right away

Your doctor will decide which BUNAVAIL dosage is right for you

- Always take BUNAVAIL exactly as your doctor tells you. Your doctor may change your dose after seeing how it affects you. Do not change your dose unless your doctor tells you to change it
- Do not take BUNAVAIL more or less often than prescribed by your doctor
- Take BUNAVAIL 1 time a day
- You may be prescribed a dose of 2 or more BUNAVAIL buccal films to be taken at the same time
- Use the entire BUNAVAIL buccal film. Do not cut, tear, chew, or swallow the buccal film. Your doctor should show you how to use BUNAVAIL the right way
- Follow the same instructions every time you take a dose of BUNAVAIL buccal film
- BUNAVAIL comes in a child-resistant foil package. Do not open the foil package until you are ready to use the BUNAVAIL buccal film. After opening the foil package, use the BUNAVAIL buccal film right away

Q: Can I inject BUNAVAIL?
A: Because BUNAVAIL contains naloxone, injecting BUNAVAIL may cause serious withdrawal symptoms such as pain, cramps, vomiting, diarrhea, anxiety, sleep problems, and cravings. Injecting BUNAVAIL may also cause life-threatening infections and other serious health problems.

Q: Can I take BUNAVAIL if I am allergic to buprenorphine?
A: Do not take BUNAVAIL if you are allergic to buprenorphine or naloxone, as serious negative effects including anaphylactic shock, have been reported.

Please see additional Important Safety Information on pages 30-31, and full Prescribing Information and Medication Guide at BUNAVAIL.com.
**Storing BUNAVAIL**

- Store at 68-77°F (20-25°C), with excursions permitted between 59-86°F (15-30°C) until ready to use
- Keep BUNAVAIL dry
- Do not freeze BUNAVAIL
- Do not use BUNAVAIL buccal film if the foil package has been damaged
- Keep BUNAVAIL in a safe place, out of sight and reach of children

**Stick to your daily BUNAVAIL routine**

BUNAVAIL is easy to use and effective, but only if you stick to the routine prescribed by your doctor. So it’s a good idea to think of memorable ways to work it into your daily routine. Here are a few suggestions.

- Keep BUNAVAIL in a place associated with other routines, as long as it is out of sight and reach of children
- Program automatic reminders on your phone, so you take it at the same time each day
- Ask a friend or family member to remind you

**BUNAVAIL: Support for patients like you**

Working through the ins and outs of your insurance coverage can be overwhelming. That’s where BUNAVAIL reimbursement services can help. The BUNAVAIL Savings Card can help lower your out-of-pocket costs for your medication. To receive a BUNAVAIL Savings Card, talk with your healthcare provider or visit www.BUNAVAIL.com.

Additionally, highly knowledgeable case managers are available and can simplify things by helping you and your healthcare provider better understand your insurance benefits so you can get access to the treatment you need.

Whether you currently have health insurance, are currently uninsured, or have limited health insurance coverage, call to speak with a case manager to discuss your options.

Call 1-800-469-0261 Monday through Friday, 8:00 AM to 6:00 PM EST.

**Q: What should I do if a child accidentally takes BUNAVAIL?**

**A:** Keep BUNAVAIL (buprenorphine and naloxone) buccal film (CIII) out of the sight and reach of children. Ingestion of BUNAVAIL by a child may cause severe breathing problems and death. If a child takes BUNAVAIL, get emergency help right away.

**Q: Can I take BUNAVAIL if I am still taking other opioids?**

**A:** Do not take BUNAVAIL before the effects of other opioids (e.g., heroin, methadone, oxycodone, morphine) have lessened as you may experience withdrawal symptoms.

Please see additional Important Safety Information on pages 30-31, and full Prescribing Information and Medication Guide at BUNAVAIL.com.
Medicines to avoid while taking BUNAVAIL

Tell your doctor about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. BUNAVAIL may affect the way other medicines work and other medicines may affect how BUNAVAIL works. Some medicines may cause serious or life-threatening medical problems when taken with BUNAVAIL.

If you have certain liver conditions

BUNAVAIL is not recommended in patients with severe hepatic impairment. BUNAVAIL may be used with caution for maintenance treatment in patients with moderate hepatic impairment.

Potential side effects you should be aware of when taking BUNAVAIL

Common side effects of BUNAVAIL include:

- Headache
- Drug withdrawal syndrome
- Nausea
- Decrease in sleep (insomnia)
- Vomiting
- Pain
- Increased sweating
- Constipation

Call your doctor for medical advice about side effects.

This is not a complete list of potential adverse events associated with BUNAVAIL.

To report negative side effects associated with taking BUNAVAIL buccal film, please call 1-800-469-0261. You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call 1-800-FDA-1088.

If you are pregnant or breast-feeding

Before taking BUNAVAIL, tell your doctor if you are pregnant or plan to become pregnant. If you become pregnant while taking BUNAVAIL, tell your doctor immediately as there may be significant risks to you and your baby; your baby may have symptoms of withdrawal at birth.

Before taking BUNAVAIL, talk to your doctor if you are breast-feeding or plan to breast-feed your baby. BUNAVAIL can pass into your breast milk and may harm your baby. Monitor your baby for increased sleepiness and breathing problems. Your doctor should tell you about the best way to feed your baby if you are taking BUNAVAIL.

Please see additional Important Safety Information on pages 30-31, and full Prescribing Information and Medication Guide at BUNAVAIL.com.
5 IMPORTANT SAFETY INFORMATION
INDICATION

BUNAVAIL® (buprenorphine and naloxone) buccal film (CIII) is a prescription medicine indicated for the maintenance treatment of opioid dependence. BUNAVAIL should be used as part of a complete treatment plan to include counseling and psychosocial support.

Prescription use of this product is limited under the Drug Addiction Treatment Act (DATA).

IMPORTANT SAFETY INFORMATION

Keep BUNAVAIL® (buprenorphine and naloxone) buccal film (CIII) out of the sight and reach of children. Ingestion of BUNAVAIL® by a child may cause severe breathing problems and death. If a child takes BUNAVAIL®, get emergency help right away.

Do not take BUNAVAIL® if you are allergic to buprenorphine or naloxone, as serious negative effects including anaphylactic shock, have been reported.

Do not take BUNAVAIL® before the effects of other opioids (e.g., heroin, methadone, oxycodone, morphine) have lessened as you may experience withdrawal symptoms.

Do not drive, operate heavy machinery, or perform any other dangerous activities until you know how BUNAVAIL® affects you.

BUNAVAIL® contains buprenorphine, an opioid that can cause physical dependence. Your doctor can tell you more about the difference between physical dependence and drug addiction. Do not stop taking BUNAVAIL® without talking to your doctor. You could become sick with uncomfortable withdrawal symptoms because your body has become used to this medicine.

Because BUNAVAIL contains naloxone, injecting BUNAVAIL® may cause serious withdrawal symptoms such as pain, cramps, vomiting, diarrhea, anxiety, sleep problems, and cravings.

BUNAVAIL® can be abused in a manner similar to other opioids, legal or illicit. Keep BUNAVAIL® in a safe place. Do not give your BUNAVAIL® to other people, it can cause them harm or even death. Selling or giving away this medicine is against the law.

Like other opioids (e.g., heroin, methadone, oxycodone, morphine), BUNAVAIL® may produce orthostatic hypotension (‘dizzy spells’) in ambulatory individuals.

Common side effects of BUNAVAIL® include headache, drug withdrawal syndrome, lethargy (lack of energy), sweating, constipation, decrease in sleep (insomnia), fatigue and sleepiness.

For more information, please see full Prescribing Information and Medication Guide for BUNAVAIL® buccal film (CIII) at BUNAVAIL.com.
